Native Atlantic salmon populations should not have to suffer to the point of extinction so we can create a sickly disease ridden population of salmon, and farm them. People are so detached from where their food comes from, so uninformed, so mislead. If most people knew how disgusting these fish farms were, they would not eat the food. We need to ban these fish farms. They are destroying the most beautiful and wild fish species, who live in beautiful and untouched natural spaces. It breaks my heart, and many others, to see such an incredible species driven to the brink of extinction by something completely avoidable. Do better. If not for ourselves, then we need to preserve wild things for the future generations. Fish farms need to be banned, and it needs to happen quickly. We are in a never ending losing battle with climate change, and this just makes things worse. Thank you.
